

COGx Client Testimonials:

Hear from Parents of COGx students:

*"Our daughter is more focused and is learning with little help from us. This never used to be the case and we are so pleased."
- Parent of COGx student, age 9*

*"After about 6 years of frustration and pain regarding my child's schooling, I have finally found a huge link that was missing. Although the various schools provided a few strategies for him to compensate for his cognitive deficits he seemed stuck in the rut of merely learning by rote. There was no spark in him, no confidence, and no real growth in the areas where he was lacking. At times, I would despair, wondering what would happen to him in the future. I know the provisions available through the schools-- public, private, special needs, would help him a bit to move through the system in his education, but **none of it would result in the real change I have witnessed in my son since he started individualized cognitive training with the COGx methodology.**"
- Parent of COGx student, age 9*

*"I've noticed that our daughter's self esteem has improved at homework time. I've asked her if I could help her with her homework to which she replies, "I can do it myself, Mommy." I'm really proud of her. **I'm seeing her attitude & self-confidence improve. This was never the case a couple months ago.**"
- Parent of COGx student, age 10*

*"Processing speed had been the most challenging issue for him going back, and with college placement we were concerned about this being an issue. **I have seen my son improve in memory and processing speed.** He used to struggle more on the math component."
- Parent of COGx student*

*"The beginning was a bit rocky, but our daughter really came to enjoy her sessions. **The teachers have told us that she is a different child from last year to this year in the classroom.** It is hard to say if it was all COGx or some growth in maturity but regardless COGx has made a huge impact on her life. She is calmer, less impulsive and able to follow multistep instructions."
- Parent of COGx student, age 9*

*"**It is like COGx has turned a light on in him.** He is problem solving on his own, his anxiety is diminished, and he is putting himself in social situations that he used to avoid."
- Parent of COGx student, age 9*

Hear from Parents of COGx students:

"We are really happy with the overall process of our son's program. The trainer was great. The program reports were great. We'd definitely do it again!"

– Parent of COGx student, age 8

"The interventions at COGx have addressed our son's main cognitive constraints and have helped him broaden his mental abilities. Medications would not be able to achieve this as they tend to increase his tendencies to perseverate on a narrow set of topics.

Conversations and these kinds of things were difficult before he started cognitive training.

I see great gains in verbal reasoning, processing information as well as retaining and retrieving facts. Multi-step tasks, therefore, have become easier.** The cognitive assessment has accurately captured his deficits as well as his gains over time. The gains are more impressive when we consider that the scores measure progress against peers. Without intervention the large initial gap between my son and his typical peers would have only grown over time as children make rapid cognitive gains during the key formative years of their lives. **I am very impressed. These results are wonderful!"

– Parent of COGx student, age 15 (diagnosed with Pervasive Developmental Disorder)

"Her confidence has increased & her grades have improved, while unevenly as classes have gotten increasingly more demanding. She is also taking her academics more seriously."

– Parent of COGx student, age 16

"I noticed his thoughts were more organized and he was able to make accurate decisions faster."

- Parent of COGx student, age 12

*My daughter went through the program a couple of years ago and benefited greatly. Before our meeting my daughter sat in the car protesting "I am not stupid." After meeting, she couldn't wait to go back after seeing a demonstration of some training activities she would be doing. She loved her trainer and looked forward to going 3x per week. **After completing the program, our daughter is a better learner and her confidence has soared.***

- Parent of COGx student, age 14

*"Our daughter's confidence is so much higher. Her Math teacher paid her a compliment the other day saying that **she was not only a faster worker, but also more accurate. I think this training has organized her brain."***

- Parent of COGx student, age 15
